## West African Resources releases Mankarga 1 drilling results

West African Resources Limited has released results from its shallow oxide drilling programme conducted at the Mankarga prospect, Tanlouka permit located in Burkina Faso.

Results from the Reverse Circulation drilling programme at Mankarga 1 prospect intercepted oxide mineralisation beneath historical artisanal workings with two scissor holes ending in mineralisation

West African Resources' shallow first pass Reverse Circulation drilling is being completed with an Aircore rig drilling to blade refusal such as TAC0657 and TAC0658, both ended in quartz veining yielding 8 metres at 1.5g/t gold and 6 metres at 1.3 g/t gold, respectively.

The Company expects oxide mineralisation from Mankarga to have similar metallurgical characteristics as the M5 oxides and will be amenable to heap leach processing. Mineralisation from the Mankarga prospect will be modelled and incorporated in a resource update later in 2015 and will be added to the mine schedule.

The Company reported that approximately 15% of the Reverse Circulation drilling targeting oxide mineralisation at Mankarga has been completed, with initial results including, 2 metres at 0.78% gold from surface and 1 metre at 0.74 g/t gold from 6 metres from hole TAC0656, 8 metres at 1.45 g/t gold from 25 metres ending in mineralisation from hole TAC0657, 6 metres at 1.32 g/t gold from 21 metres ending in mineralisation from hole TAC0658 and 1 metre at 0.65 g/t gold from surface from hole TAC0659.

Richard Hyde, Managing Director of West African Resources, commented, "Shallow RC drilling at the MANKARGA prospect has intercepted mineralisation in the oxide zone beneath artisanal working and above historic drilling. The results at Mankarga will be added to the current feasibility study. Adding higher grade oxide tonnes to the mine schedule will enhance the economics of the project. RC drilling is ongoing at Mankarga and, importantly, only 15% of the current program has been completed."

West African Resources Limited is an ASX and TSX listed gold and copper exploration company with operations in Burkina Faso.
